

1. Can I use frameworks like Laravel and Bootstrap to do the test?

⇒yes

2. I will need to implement the api for 3 pages like in the design right, what about the frontend? Are there any document requirements ( swagger , postman ... ) ?

⇒No specific material

3. Those 3 pages describe information about a personal health management application, do I need to write an api to input data (CRUD)? And if there is a data entry section, what information is entered by the system administrator and which part is entered by the user (types of breakfast - afternoon - evening meals ..., meal pictures, weight, other items) blog post Column page ... ) ?

⇒Input API is required

It's up to you how you create it.

Please leave it in the document when it is created

4. Is there a login - registration api?

⇒Although it is not specified in particular, points will be added to the evaluation once it is created.

5. Is there any requirement to use any database?

⇒There is no particular specification, please describe in the document if you decide which one to use

6. Do you need authentication?

⇒There is no particular specification, but if you create it, please write it in the document

7. What does the Date/Achievement rate in figma being 5/21 75% mean?

⇒ Show today's achievement rate.

So the achievement rate on 5/21 is 75%

8. How to calculate Top Page, the Date/Achievement rate section, the achievement rate

⇒ Formula:  $\text{Completed} = \text{Total Goals Completed} / \text{Total Goals Set}$

9. How to calculate the data in the weight/body graph?

⇒ There is no particular specification, you can simply enter it, or you can calculate it from your weight and register it.
